## Introduction

SCHOOL BREAKFAST REPORT CARD

Families who experience FOOD INSECURITY do not always have access to adequate food for a healthy lifestyle. Sometimes, families that are food insecure must make difficult financial decisionspay the electric bill or buy groceries?-and there may be little money left for food.

Approximately 1 in 5 children in Oklahoma live in households where access to food may be limited (22.6\%). This is higher than the national average (17.9\%). ${ }^{\text {i }}$

Fortunately, there are several nutrition programs available in Oklahoma to address food insecurity-including the School Breakfast Program. The School Breakfast Program is the second largest child nutrition program in Oklahoma, serving a total of 35.6 million breakfast meals and bringing in approximately $\$ 61.4$ million for the state in school year 2016-2017. ii Not only does the School Breakfast Program serve as one of the largest defenses against hunger, but research also demonstrates that eating breakfast can improve attendance, decrease tardiness, and result in better class participation. ${ }^{\text {.iii }}$

Maximizing school breakfast participation can yield improvements for Oklahoma students and schools alike. But many eligible students are not being reached with school breakfast. In school year 2016-2017, 58.4 percent of Oklahoma students participating in free or reduced-price lunch also participated in breakfast, ranking Oklahoma 23rd in the nation for breakfast participation. ${ }^{\text {iv }}$ Fortunately, there are tools available to make school breakfast cost effective and wide reaching. Hunger Free Oklahoma has set an ambitious, but achievable, goal of reaching 80 free and reduced-price eligible students with breakfast for every 100 participating in school lunch. ${ }^{v}$

## School Breakfast Program <br> SCHOOL BREAKFAST REPORT CARD

The SCHOOL BREAKFAST PROGRAM gives students the opportunity to start their day full, focused, and ready to learn. Eating breakfast at school can provide nutritious food for students whose families struggle to regularly access food. In addition to addressing food insecurity, eating school breakfast can improve students' overall nutrition and academic performance. Studies have shown that students who eat breakfast consume more fruits and milk and have a lower probability of obesity. ${ }^{\text {vi }}$ Eating breakfast can also improve student performance including increased attendance, better concentration, and fewer behavioral problems. vii

Schools that operate the School Breakfast Program are eligible for FEDERAL REIMBURSEMENT for each breakfast meal served. As of 2010, 27 states had enacted statutes requiring schools with a high percentage of students eligible for free or reduced-price meals to offer breakfast. viii For example, in Texas, schools with 10 percent or more of students eligible for free or reduced price meals must operate the School Breakfast Program and schools with 80 percent or more of students eligible for free or reduced-price meals must offer breakfast free to all students. Offering breakfast free to all students is known as UNIVERSAL SCHOOL BREAKFAST (USB). Oklahoma is one of 24 states with no state mandate regarding school breakfast. At a local level, eligible schools can take advantage of the COMMUNITY ELIGIBILITY PROVISION (CEP) which allows schools with 40 percent or more of students eligible for free or reduced-price meals are able to serve breakfast (and lunch!) free to all students through CEP. For more information on this option, see page 6.

Serving breakfast free to all students reduces the stigma associated with eating breakfast at school and can increase participation in the program.

Some schools go the extra mile to ensure students are prepared for the school day by using ALTERNATIVE SERVICE MODELS, like BREAKFAST IN THE CLASSROOM, to make breakfast available to all students and increase participation. More information on non-traditional breakfast service models can be found on page 17.

## Breakfast Participation Across Oklahoma

More students are starting their school day fueled for success, particularly students that may not have regular access to food at home. In school year 2016-2017, 190,522 students who ate free or reduced-price lunch also ate breakfast, an increase of nearly 7,000 students compared to 2014-2015. ix While Oklahoma has certainly experienced gains in breakfast participation since 2015, other states continue to outpace Oklahoma's participation growth, evidenced by the state's national ranking (23rd) in 2017. ${ }^{\text {. }}$

Fortunately, schools across Oklahoma are finding ways to increase participation in school breakfast to provide financial sustainability for their nutrition programs.
Strategies such as offering breakfast free to all students can decrease stigma, increase participation, and increase the financial reimbursements schools receive.

Additionally, serving breakfast after the bell, through alternative service models like Breakfast in the Classroom or GRAB AND GO, can encourage students to develop healthy eating habits and make breakfast a part of their regular school day. Promoting participation in school breakfast can support both the student and the school's success by fostering academic, health, and behavioral benefits.

## Universal School Breakfast

Schools have the opportunity to directly address student food insecurity by offering breakfast free of charge to all students regardless of income status through Universal School Breakfast (USB).

Making breakfast available to every student can significantly increase participation, which reduces the stigma of eating breakfast at school and eliminates the possibility of a student not being able to afford the cost of a meal.

Universal School Breakfast can be served through PROVISION 2 and through the Community Eligibility Provision (CEP). Schools using Provisions 2 and 3 must collect meal applications to determine free, reduced-price, and paid claiming rates. However, schools that utilize CEP, are not required to collect meal applications.

Pairing USB with an alternative service model can lead to the greatest increase in participation, and the greater the participation, the greater the federal reimbursement.

## Community 퍼igibility Provision

The Community Eligibility Provision (CEP) enables schools to provide breakfast and lunch free to all students without the hassle of meal applications.

In school year 2016-2017, 301 schools out of 1,298 eligible or near-eligible schools in Oklahoma utilized CEP. ${ }^{\text {xi }}$ Fortunately, more schools participated in 2016-2017 than the prior year: approximately one third (31.9\%) of all eligible schools in Oklahoma utilize the program, an increase from 21.3 percent in 2015-2016. ${ }^{\text {xii }}$

CEP streamlines the administrative process-making it easier on parents and administrative staff. Instead of collecting endless amounts of paper, schools are reimbursed based on the number of identified students-those eligible for free school meals through direct certification because of their enrollment in other programs like the Supplemental Nutrition Assistance Program (SNAP), Temporary Assistance for Needy Families (TANF), or Head Start. The percentage of identified students is multiplied by 1.6 to determine the number of students reimbursed at the free rate, and the remaining number of students are reimbursed at the paid rate. For schools with 62.5 percent or more identified students, 100 percent of meals are reimbursed at the free rate. xiii

This formula simplifies and improves the reimbursement rates for highneed schools. It can also result in increased revenue that can be used to buy equipment for nutrition programs, pay food service staff, and improve food quality-just as long as the funds stay within the nutrition department budget. The new claiming percentage cannot decrease for four years, but if a school's number of identified students increases during this period, a school can recalculate its claiming percentage for an improved rate. Additionally, the new free claiming percentage is used to determine E-Rate and State Compensatory Education funding for CEP schools. ${ }^{\text {xiv }}$

Although CEP does not affect the amount of Title I funds a school district receives, it may affect how funds are allocated to individual campuses. More details can be found in the U.S. Department of Education Guidance on CEP and Title I Funding. ${ }^{\text {.v }}$ Any school, district, or group of schools can use CEP if they have an identified student percentage of at least 40 percent.

## DID YOU KNOW?

How is CEP different from Provision 2? Although Provision 2 also allows schools to provide free meals to all students, schools are still required to collect meal applications to determine free, reduced-price, and paid percentages. The determined rates are locked in for a four-year period but cannot improve if the identified student percentage increases during the period.

# Every Student Succeeds Act 

SCHOOL BREAKFAST PROGRAM

The Oklahoma State Department of Education (OSDE) and local partners are making significant strides in improving and prioritizing the statewide reach of school breakfast. Signed into law in December 2015, the Every Student Succeeds Act (ESSA) reauthorized the Federal Elementary and Secondary Education Act. In September 2017, OSDE submitted its Oklahoma ESSA Consolidated State Plan to the Federal Department of Education with a vigorous endorsement of the concept of "food as an intervention" placed prominently within other, more traditionally academic, approaches to increase student success.

The plan notes that repeated studies demonstrate the positive relationship between breakfast and increased learning capabilities. Robyn Miller, OSDE Deputy Superintendent for Educator Effectiveness and Policy Research, observes, "When you look at the data in Oklahoma with hunger, there is a sense of urgency.

What we are doing that is more unique is using food and child nutrition as an academic intervention. We have children who are coming to school hungry and that has an impact on cognitive ability. You can't even begin to teach these children if they are hungry. I know that sounds pretty simple, but I think that conversation needs to be repeated." ${ }^{\text {xvi }}$

The ESSA Plan provides various strategies to increase breakfast participation by 20 percent by 2025. Examples include encouraging schools to adopt alternative breakfast delivery models like Breakfast in the Classroom and removing bureaucratic barriers to participation in Community Eligibility Provision (CEP) so that 75 percent of all CEP eligible schools are participating by 2025 (from the current 32 percent). The OSDE is also beginning an innovative partnership with the Oklahoma Department of Human Services and Hunger Free Oklahoma to implement a SNAP Outreach in Schools Pilot Project. The goal of this project is to increase SNAP participation in six strategically chosen school districts, which would strengthen families' food purchasing power, while helping ensure the success of CEP adoption by increasing a school district's DIRECT CERTIFICATION ratesbenefitting overall food security, child food security, and Oklahoma school districts. ${ }^{\text {xvi }}$

The Oklahoma plan is the most comprehensive discussion of school breakfast and the Federal Nutrition Programs of any ESSA plan in the country. This is a direct result of the productive relationship between OSDE leadership and Hunger Free Oklahoma. State Superintendent of Public Instruction Joy Hofmeister was already focusing on child hunger when Hunger Free Oklahoma joined her by providing data analysis, outreach strategies, and messaging. Together, they fashioned a robust "food as intervention" plan that not only provides a critical platform for child nutrition expansion but has become a nationally recognized model.

## Opportunities For State Legislation To Impact Breakfast Participation And Food Insecurity Rates

State lawmakers have the unique opportunity to impact food insecurity rates statewide by enacting policies that improve the accessibility of the School Breakfast Program for students, especially those at high-need schools. Recent research suggests that access to breakfast at school, especially for students in elementary schools, "reduces the likelihood of indicating low food security by over 15 percentage points." "xviii Legislation requiring breakfast be served after the start of the school day through alternative service models or requiring that breakfast be served free to all students are best practices. The Food Research and Action Center noted that Colorado experienced a nearly 10 percent increase in the number of low-income students eating breakfast at school once schools began serving breakfast after the bell following the enactment of House Bill 13-1006. .ix In Texas, Senate Bill (SB) 376 from the $83{ }^{\text {rd }}$ legislative session requires all schools with 80 percent or more of students eligible for free or reduced-price meals to offer breakfast free to all students. Since the bill's implementation in 2014-2015, Texas has seen a four percent increase in school breakfast participation, serving an additional 10.5 million meals. ${ }^{\text {xx }}$ For examples of current state legislation, visit Share Our Strength's Center for Best Practices School Breakfast webpage.

## Child Nutrition Reauthorization

CHILD NUTRITION AND WIC REAUTHORIZATION authorizes all federal school meal and child nutrition programs. These programs provide funding to ensure that lowincome children have access to nutritious meals. Although permanently authorized, Congress must review the laws governing these programs every five years, which provides an opportunity to improve and strengthen their effectiveness. The two statutes up for reauthorization impact multiple child nutrition programs including the School Breakfast Program. The current law, the HEALTHY, HUNGER-FREE KIDS ACT OF 2010, expired on September 30, 2015, but meal programs continue to operate as long as funding continues. ${ }^{\text {xxi }}$

## Breakfast As Part Of The School Day

TRADITIONAL BREAKFAST, eaten in the cafeteria, has been a staple in Oklahoma schools. However, larger schools, earlier start times, and a growing student population make it difficult to ensure that all students have the opportunity to eat school breakfast. Implementing alternative breakfast service models, such as Breakfast in the Classroom or Grab and Go, can significantly increase participation. Research shows that regularly making breakfast a part of the school day can lead to improved school performance. xxii,xxiii With healthier and more focused students, many schools across Oklahoma are finding success with alternative service models.

...You can't even begin to teach these children if they are hungry.

Making breakfast a part of the school day can form positive habits for students and lead to improved classroom performance. It also reduces the stigma of eating breakfast at school by creating a new norm in the classroom for all students.

## Breakfast As Part Of The School Day

## What It Is

Universal School
Breakfast

Community Eligibility Provision

## Alternative

 Service Models+ Offers breakfast free to all students.
+ Can be served through Provision 2, Provision 3, and CEP.
* Can decrease stigma by serving free breakfast to all students.

Allows schools to serve breakfast and lunch free to all students without collecting household applications.

+ Schools, districts, or groups of schools with 40 percent or more identified students.
+ Different from Provision 2, the CEP rate is locked in for four years but can increase if the identified student percentage increases.

The most common method to improve participation in school breakfast.

Making breakfast a part of the school day can benefit both the student and the school.
t. Multiple service models are available for schools to customize for specific needs.

## Making It Work

+ Utilize CEP to increase reimbursement and assist with any additional expenditures.
+ Make breakfast a part of the school day to increase participation and reimbursement.
+ Resources are available to assist schools with implementing CEP.
+ An accurate identified student percentage is important to ensuring a proper CEP rate.
+ Alternative forms can be used to collect household information if desired.
+ High participation and programmatic feedback are keys to success.
+ Offer Versus Serve improves participation and decreases food waste.
+ Assessment, planning, and evaluation are critical.

## Breakfast Fuels <br> Success at School

SCHOOL BREAKFAST REPORT CARD

Regular consumption of breakfast has been associated with improved school performance.xxiv Schools that serve Breakfast in the Classroom have shown higher attendance rates than schools that do not serve Breakfast in the Classroom. ${ }^{\text {x×v }}$

- Participation in school breakfast has been associated with decreased tardiness and absences. xxvi
- Teachers have reported better concentration and alertness among children who participated in Universal School Breakfast.
- Teachers have reported that children who participated in Universal School Breakfast had more energy and better attention than those who did not participate. ${ }^{\text {xxwiii }}$
- Breakfast consumption has been associated with short-term benefits in improving selected learning skills, particularly memory. ${ }^{\text {xix }}$
- Participation has shown to triple when schools served Universal School Breakfast through Breakfast in the Classroom. ${ }^{\text {xxx }}$

## Breakfast Promotes Good Health

- School breakfast can reduce food insecurity status among children. ${ }^{\text {xxxi }}$
- School breakfast participation has been associated with lower BMI and lower probability of obesity and being overweight. ${ }^{\text {xxxii }}$
- Universal School Breakfast has been linked to fewer visits to the school nurse. ${ }^{\text {xxxiii }}$
- Participation in Universal School Breakfast has shown to positively impact children's mental health, including reducing behavior problems, anxiety, and depression. ${ }^{\text {xxxiv }}$
- School breakfast has been linked to better eating habits among children, particularly in reducing the percentage of calories consumed from fat. ${ }^{\text {xxvv }}$

## Breakfast Improves Nutrient Intake

- Children with access to school breakfast tend to have a healthier diet when school is in session than when school is not in session. ${ }^{\text {xxvi }}$
- Studies have indicated that students who eat breakfast have fewer vitamin deficiencies, are less likely to experience chronic illnesses, and are more likely to maintain a healthy BMI. xxvvii
- A study funded by Dairy MAX suggests that Breakfast in the Classroom is an innovative way to increase participation in school breakfast and the intake of milk and essential nutrients among elementary-aged students. xxxvii

## Breakfast Service Models

When most people think of eating breakfast at school, they probably think of eating in the cafeteria. However, high student enrollment and earlier start times can make it difficult for students to arrive early enough to sit and eat a meal before class begins. A late school bus, long lines, or the stigma of eating at school can all lead to low participation in school breakfast when it is served in the cafeteria. To address these issues, many schools implement alternative service models to encourage students to participate in breakfast.

## Breakfast In The Classroom

Breakfast in the Classroom (BIC) is one of the most effective models for increasing participation in school breakfast. Making breakfast a part of the school day can form positive habits for students and lead to improved classroom performance. ${ }^{\text {xxxix }}$ It also reduces the stigma of eating breakfast at school by creating a new norm in the classroom for all students. Although BIC can be customized in multiple ways to work best for each school, the general concept is fairly simple. Cafeteria staff prepare breakfast before it is delivered in cooled or heated containers to the classrooms. Students then collect their breakfast meals, which have already been organized according to the USDA nutrition standards, while the teacher counts who participates (serving breakfast free to all students can make counting even simpler and more accurate). While students eat at their desks, the teacher has time to collect homework, take attendance, and prepare for the first lesson of the day. Students take care of clean up and trash bags are placed outside the room to be collected by custodial staff. Elementary schools most commonly implement BIC, and many run successful procedures in classes as young as Pre-K. After solidifying the classroom routine, schools utilizing this model can see an increase in participation in as little as one month.

Although eating breakfast in the classroom creates a new set of procedures to learn, the most common obstacle to implementation is obtaining the equipment needed to transport the meals. Some schools apply for grants to purchase the carts or coolers needed for their new program. However, after a few months of improved participation and increased revenue, many schools are able to purchase additional equipment or expand their programs to other campuses. Large schools can strategically implement BIC in waves (groups of campuses at a time) to use revenue from one group of current BIC schools to buy needed equipment for a future group.

Regardless of the specific procedures for each school, it is critical that all staff involved regularly communicate. Ensuring that teachers are supported and included in developing the procedures is important to identify challenges or ways to improve the program. Including custodial staff in the decision-making can ensure proper cleaning methods and support from other departments. Parents can also be key partners by volunteering in the classroom or making sure their student arrives to school on time.

## QUICK TIPS FOR BREAKFAST SUCCESS

Utilize recyclable paper sacks for students to carry meals rather than trays to minimize clean up.

Offer individual items for students to choose from to increase participation and decrease food waste.

Locate the cart or kiosk where students congregate to maximize the potential for participation. A hybrid model has students pick up breakfast from the cart and take the meal to the classroom.

Meal service can occur before the bell, between classes, or during a midmorning break.

## Grab And Go Breakfast

Grab and Go is an especially effective breakfast service model in middle and high schools. The flexibility of this model allows breakfast to go to the students by placing carts or kiosks in high-traffic areas such as courtyards, hallways, or drop-off zones to maximize participation. Breakfast meals are served pre-assembled or in individual items on a cart or kiosk. Typically, a cart is mobile and can be moved to various locations, and a kiosk is a stationary structure utilized throughout the day for other purposes; both can be multi-functional to serve all nutrition programs. Serving meals pre-assembled can minimize labor and packaging, and OFFER VERSUS SERVE can lead to higher participation and less food waste. Most schools use paper sacks for students to transport their meals, but a tray or other container can be used.

The success of this model is most dependent on location and serving time. Younger students are usually interested in eating breakfast earlier in the morning, but some high schools find that serving breakfast after first period, or during a mid-morning break, is most appealing to older students. A common concern regarding Grab and Go is counting participation, but using ID cards, thumbprint readers, or PIN numbers can improve efficiency and accuracy of the process.

Offering breakfast free to all students simplifies counting and claiming even more. Expenditures can also be a challenge, whether purchasing a new cart or customizing an existing structure to fit the needs of the school. However, financial aid from grants or community initiatives can support small schools implementing Grab and Go for the first time or schools looking to improve their current model. Also, schools that implement in waves can use revenue from a group of current Grab and Go schools to buy needed equipment for a future group. However schools decide to implement Grab and Go, it is important that all involved staff members are included in the planning and evaluation processes. Communication between educators, administrators, cafeteria staff, and custodial staff is essential to running a smooth operation and identifying obstacles. It is also critical that students and parents are consistently involved in the program.

## NTH

## Traditional Breakfast

A large cafeteria or low student enrollment can allow breakfast in the cafeteria to be successful, but it is important that students arrive at school with enough time to eat. Offering breakfast free to all students can also aid participation in traditional breakfast.

## Breakfast In The Classroom

One of the most popular alternative models, breakfast is brought into the classroom to ensure that all students have the opportunity to eat. There are many customizable options to tailor this model to individual campuses.

## Grab And Go Breakfast

This model is usually offered to older students that can carry their meals from a cart or kiosk. Some schools provide meals pre-assembled and others offer individual items for students to choose from.

## Second Chance Breakfast

Sometimes older students are not hungry when they first arrive at school. Second Chance Breakfast allows students to get breakfast when they are hungry, usually after first or second period. Meals are usually served via kiosk or cart.

## Breakfast On The Bus

For schools with a long commute, this model serves students during the bus ride before they arrive at school. Breakfasts are stored in cooled or heated containers and picked up by students as they enter the bus.

## Vending Machines

Especially popular in high schools, vending machines are a convenient method for serving breakfast. Students can enter an ID or PIN number to retrieve the meal, and the machine tracks the meals served.

## Steps To Implementation

MEET WITH STAKEHOLDERS: The first step to beginning a new program is to bring together all stakeholders. Including cafeteria staff, custodial staff, and educators in the process of creating a new program brings important insight and feedback unique to their respective roles. Students and parents should not be left out; their input can help to identify the needs and perspectives of the school's families.

ASSESS THE CURRENT PROGRAM: Once all involved have been brought to the table, the second step is to assess the current breakfast program. Determining the efficiency and effectiveness of the current program is critical to understanding its needs and challenges. It is equally important that involved staff are educated on the benefits of breakfast. When staff members understand why breakfast is important for students and educators, they see the value in their support and input.

CREATE A PLAN: After completing the assessment, make a plan. Define goals, outcomes and strategies, and assign tasks for maximum organization and preparedness.

PUT THE PLAN INTO ACTION: Training all staff involved in the breakfast program is a critical step to ensure the plan has a successful start. Training can involve a practice run and allow for questions and concerns to be shared. For some schools, training before a program
 begins and re-training during the year is a best practice.

EVALUATE THE PROGRAM: It usually takes about three months for new breakfast models to become routine. At that time, or at the end of a semester, it is recommended to evaluate the program to identify strengths and areas for growth to improve programming, increase participation, and refine procedures. It is important to check in with all involved staff, as well as students and parents. Some schools prefer to evaluate continuously throughout the year or evaluate at multiple checkpoints.

SHARE SUCCESS STRATEGIES: Finally, sharing your success with other schools has a significant impact on the expansion of school breakfast programs and participation across the state. Mentoring beginner schools or partnering with similar schools can strengthen and improve the breakfast programs of both schools. Educating others on best practices and challenges can encourage others to advocate for their own schools to implement alternative breakfast service models.

# Success Strategies 

SCHOOLBREAKFAST REPORTCARD

Across the country, school districts, nonprofits, and community organizations are teaming up to improve participation in school breakfast. Utilizing the resources of multiple groups provides a community of support for school breakfast programs that bolsters their success. Below are ideas on how your group can partner with others to ensure more Oklahoma students start their day fueled for success.

## Healthy From The Start

In 2015, then Secretary of Agriculture, Tom Vilsack, discussed the effects of childhood food insecurity at the American Academy of Pediatrics National Conference. ${ }^{\times 1}$ During his address, he reported on the developments of the fight against child hunger and commended pediatricians for their commitment to improving child nutrition. The American Academy of Pediatrics had recently released a policy statement recommending that pediatricians utilize their relationships with families to inquire about food security in order to reduce child hunger. This collaboration demonstrates a cross-discipline awareness that food insecurity can impact an individual's health and well-being. Organizations working at the local level can ensure that pediatricians are equipped with resources by convening partnerships between school nurses and local health care officials. Educating health care providers about existing nutrition programs and encouraging them to inform clients of these resources can go a long way in reducing childhood hunger.

## Best Practices For Schools

Schools across Oklahoma have found innovative, creative, and successful ways to address challenges that can come with implementing an alternative breakfast service model. Common challenges with strategies to overcome them are listed here. All schools have their own unique breakfast programs, and sharing best practices with other schools can improve the efficiency and success of alternative breakfast service models.

## Time Management

Whether students eat breakfast in the classroom or have a second chance after first period, schools do not want instructional time to be interrupted. It is critical to make breakfast a part of the regular school day routine so that, as students develop a pattern of eating breakfast at school, it becomes just as normal as eating lunch in the middle of the day. Most schools find that teacher support and student leadership of procedures help the program run smoothly. Some teachers incorporate the breakfast meal into class curriculum by teaching nutrition and math skills or reading a book together during the meal. Most teachers utilize this time to prepare lessons, take attendance, collect homework, or check in with students. There are multiple online sources with activities and lesson plans designed specifically to help educators make the most of breakfast time. ${ }^{\text {. }}$, xlii, xilii, xliv

## Reducing Food Waste

Some schools have found success through creative menu planning, using leftovers throughout the week, implementing Offer Versus Serve (OVS), and determining which items are most (and least) popular. To reduce waste in the classroom, teachers can utilize a share table to allow students to contribute packaged food they don't want to other students that may be hungry for seconds or need a snack later in the day. School districts or individual campuses can pledge to decrease their waste by participating in a Waste Challenge and combine it with education on the impact of food waste. State legislators have also considered measures to improve donation of uneaten food from school meal programs for redistribution on campus through resources such as food pantries.
 feedback from staff on the strengths and areas for improvement of the program. At individual campuses, involving staff in the creation and improvement of procedures can lead to greater support in and out of the classroom. At the district level, proper communication across departments and bringing together the necessary decision makers can lead to greater administrative support. There are also online resources available to help schools build program support.r|v

## Increasing Participation

A common concern among new and veteran operators of alternative service models is low participation. However, there are several simple, strategic methods to improve student participation in school breakfast. Many schools kick off the school year or new breakfast service with promotional events to excite students and parents about eating breakfast at school. Teachers can play a major role in encouraging participation by eating breakfast with their students and modeling positive habits. Schools have also found that educating parents on the availability of the meal and the benefits of breakfast has led to an increase in the number of students participating in the program. Making breakfast part of the normal school day routine can create healthy habits for students that can lead to a new normal. Additionally, involving students in the service procedures can develop a sense of ownership of and responsibility for the program. Promoting breakfast as an important component to a successful school day can go a long way toward improving participation. ${ }^{\text {xvi }}$

## Improving Food Quality

Improving the quality of meals served to students can seem like a daunting mission. After ensuring proper nutrition components and portion sizes, appealing to choosy eaters might seem out of reach. However, a little creativity and planning can help schools achieve both. Trying new recipes with food already purchased or offering a range of spices can enhance any menu. Presentation can also make a difference, such as placing fruit in baskets rather than steel trays or displaying vegetables at the start and end of the line to give students a second chance to add to their plate. Involving students is a surefire way to improve menus. Taste tests indicate popular and unpopular items, and nutrition education encourages students to try new foods they may not be familiar with. Additionally, sharing menus with other schools may generate new ideas and boost the meals of both schools. For more tips, visit the USDA's website. ${ }^{\text {Xvii, } x \text { lviii }}$

## Financial Expenditures

For some schools, the desire to implement a new model is not the issue but rather how to fund the program. Fortunately, schools have multiple options for acquiring the initial funds it takes to kick off a new breakfast program. Applying for a mini-grant is a common approach for schools that need to purchase equipment for the first time or invest in promotional materials. Large districts that have enough funding to implement an alternative service model at a few sites can utilize a wave strategy to create revenue to fund other sites. In this strategy, a group of sites implements the service model, and after three months the revenue from this group funds the new service model in another group and so on. This method requires high, consistent participation. A school's community partners may be willing to fund a new program or serve as volunteers in order to save labor costs. Whichever method a school chooses to fund its program, financial planning and preparation will pay off in the long term. ${ }^{\text {xlix }}$

## Maintaining Accountability

Counting participation in breakfast and ensuring accurate meal claims can be confusing and time consuming without proper training. Teachers' concerns of time management and extra responsibility reinforce the need to regularly train staff on counting and claiming meals. Combining participation and class roster lists can minimize the hassle and errors in counting participants. Utilizing school ID cards or PIN numbers can simplify the process and increase efficiency. Electronic systems are not necessary to use student IDs-if a school does not have ID or thumbprint scanners, it can collect cards in a basket and return to students after the meal. Any trained volunteer, staff member, or teacher can count participation. As an additional bonus, some schools offer free breakfast to teachers as an incentive!

## State Participation

OKLAHOMA

## Glossary

## A

## ALTERNATIVE SERVICE MODEL

Breakfast service models used by schools to serve school breakfast, instead of traditional cafeteria service, to expand access to school breakfast. These models can include Breakfast in the Classroom, Grab and Go, Second Chance Breakfast, and Breakfast Vending Machines. ${ }^{\text {.vi }}$

## AVERAGE DAILY PARTICIPATION (ADP)

The average number of students participating in a school meal program each day. ${ }^{\text {lvii }}$

## B

## BREAKFAST IN THE CLASSROOM (BIC)

An alternative service model that allows students to eat breakfast in their classrooms after the start of the school day. Students or staff may deliver breakfasts to classrooms from the cafeteria in coolers or insulated rolling bags, or school nutrition staff can serve breakfast from mobile carts in the hallways. ${ }^{\text {Ivii }}$

## C

## CHILD NUTRITION REAUTHORIZATION

Authorizes critical child nutrition programs, including school breakfast and lunch programs, summer meals, afterschool meal programs, and the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC). ${ }^{\text {lix }}$

## COMMUNITY ELIGIBILITY PROVISION (CEP)

An innovative program that makes it easier for high-need schools to serve free mealsboth breakfast and lunch-to all students by removing the need for schools to collect paper applications. ${ }^{\text {Ix }}$

## D

## DIRECT CERTIFICATION

A process to certify eligible children for free meals without the need for household applications. Student enrollment lists are matched against SNAP agency records and records of other assistance agencies whose participants are eligible for free meals. ${ }^{\text {lx }}$

## ㄷ

## FEDERAL REIMBURSEMENT

Money provided to states by the federal government for breakfasts, lunches, and afterschool snacks served to children participating in the National School Breakfast and School Lunch Programs. ${ }^{\text {Ixii }}$

## FOOD INSECURITY

Food insecurity is the lack of consistent access to adequate food to support a healthy life. It is an economic and social condition that may result in hunger (a physiological condition), if it is severe or prolonged. ${ }^{\text {liii }}$

## FREE AND REDUCED-PRICE MEALS

Terms used to describe a federally reimbursable meal (or snack) served to children who apply for and qualify because their family's income is below 185 percent of the federal poverty threshold. ${ }^{\text {xiv }}$

## G

## GRAB AND GO

Grab and Go is a breakfast service delivery model that allows students to pick up conveniently packaged breakfast meals from mobile service carts in high traffic areas when they arrive at school or between classes. ${ }^{. x v}$

## H

HEALTHY HUNGER-FREE KIDS ACT OF 2010
This legislation, aimed at improving nutrition, authorizes funding and sets policy for USDA's core child nutrition programs: the National School Lunch Program, the School Breakfast Program, the Special Supplemental Nutrition Program for Women, Infants and Children (WIC), the Summer Food Service Program, and the Child and Adult Care Food Program. ${ }^{\text {kxi }}$

## HYBRID MODEL

Many schools operate a hybrid model that combines certain elements of Breakfast in the Classroom (BIC), Grab and Go, Second Chance Breakfast and/or Breakfast Vending. ${ }^{\text {|kxii }}$

## N

NATIONAL SCHOOL LUNCH PROGRAM (NSLP)
The National School Lunch Program is a federally assisted meal program operated in public and nonprofit private schools and residential child care institutions. It provides nutritionally balanced, lowcost or free lunches to children each school day. The program was established under the National School Lunch Act, signed by President Harry Truman in 1946. Ixvii

## 0

## OFFER VERSUS SERVE (OVS)

Offer Versus Serve is a provision in the National School Lunch Program and School Breakfast Program, that allows students to decline some of the food offered. The goal is to reduce food waste in school meal programs by permitting students to decline foods they do not intend to eat. ${ }^{\text {lxix }}$

## P

## PROVISION 2

A federal School Breakfast Program (and National School Lunch Program) option for schools to reduce the paperwork and simplify the logistics of operating school meals programs. Provision 2 enables schools and institutions to provide free meals without the burden of collecting applications and tracking and verifying school meal data every year. ${ }^{1 \times x}$

## S

SCHOOL BREAKFAST PROGRAM (SBP)
The School Breakfast Program provides cash assistance to states to operate nonprofit breakfast programs in schools and residential childcare institutions. The USDA

- Food and Nutrition Service administers the SBP at the federal level. State education agencies administer the SBP at the state level, and local school food authorities operate the program in schools. ${ }^{1 \times x i}$

## T

## TRADITIONAL BREAKFAST

Traditional breakfast is school breakfast served in the cafeteria before the school day begins. For students who already participate in the National School Lunch Program, eating breakfast in a familiar cafeteria setting can help prepare them for an alert and productive day at school. Traditional breakfast works best when the cafeteria is centrally located and already set up for a large flow of students in one location. It requires no special transportation or packaging of foods and is conducive to serving hot food options. ${ }^{1 \times x i}$

## U

UNIVERSAL SCHOOL BREAKFAST (USB)
Universal School Breakfast refers to any program that offers breakfast at no charge to all students, regardless of income status. ${ }^{\text {Ixxiii }}$

## Technical Notes

## COUNTY AND DISTRICT LEVEL BREAKFAST PARTICIPATION IN OKLAHOMA

The following appendix provides breakfast participation data for Oklahoma counties and school districts. This data set represents school years 2015-2016 and 2016-2017 and lists public and charter schools. Data was retrieved from the Oklahoma State Department of Education (OSDE) through a Public Information Request. Below, you will find descriptions of the data indicators in the table, including how we define them and how they were calculated.

## FR ELIGIBLE (\%)

Free and Reduced-Price Eligible. This is the percentage of students eligible for free or reduced-price (FR) meals.

This data is based on district-level October enrollment figures. Specific cells of enrollment data were redacted if the number of students in an enrollment category (free, reduced, or paid) was between 1 and 3, inclusive, per the state agency's confidentiality policy. An asterisk (*) indicates the redacted or missing data for that district.

## FR BREAKFAST ADP (\#)

Free and Reduced-Price Breakfast Average Daily Participation. This indicator is the number of students participating in FR school breakfast during a given school year. This was calculated by dividing the total number of FR breakfasts served per district by the total number of operating days. County-level cells sum up district-level FR Breakfast ADP.

## FR STUDENTS IN SBP PER 100 IN NSLP (\%)

Free and Reduced-Price Students in the School Breakfast Program (SBP) per 100 in the National School Lunch Program (NSLP). Hunger Free Oklahoma sets a state goal of reaching 80 FR eligible students with breakfast for every 100 participating in FR school lunch. Put another way, this is the ratio of FR breakfast students to FR lunch students (FR breakfast ADP / FR lunch ADP).

## ADDITIONAL STUDENTS SERVED IF 80 PERCENT REACHED (\#)

The number of additional students the district or county could reach with breakfast if 80 percent of students participating in free or reduced-price (FR) lunch were served breakfast. $A^{\prime \prime-}$-" in this column indicates the district or county has already met the 80 percent benchmark.

## ADDITIONAL DOLLARS IF 80 PERCENT REACHED (\$)

Additional reimbursements the district or county would accrue if 80 percent of students participating in free or reduced-price (FR) lunch also participate in breakfast. A "-" in this column indicates the district or county has already met the 80 percent benchmark.

This was calculated using the "the breakfast calculator method," borrowed from FRAC, which applies the current (2017) percentage of free students and percentage of reduced students to the total number of Additional Students Reached. We take the number of "additional" students eligible for free meals and the number of "additional" students eligible for reduced-price meals and multiply each by respective reimbursement rates and total operating days.

## CHANGE IN RATIO OF SBP TO NSLP PARTICIPATION

The year on year change in the ratio of FR SBP Students to FR NSLP Students. An increase in this percentage indicates improved breakfast participation.

## TECHNICAL NOTE

Data represented here were collected from OSDE and include enrollment and claim data for the months of September through May. Asterisks indicate redacted or missing data, per the state agency's confidentiality policy.
